

Summary

Software Engineer with experience shipping customer-facing web products and internal tooling. Strong in TypeScript, modern React, and pragmatic platform work: testing, CI reliability, and incremental modernization of legacy systems. Comfortable owning features end-to-end, collaborating with design/product, and improving delivery velocity without sacrificing quality.

Experience

HelioWorks

July 2024 - June 2025

Software Engineer (Frontend Platform)

Hybrid (UK)

- Incrementally modernized a large React/TypeScript application by introducing clearer module boundaries, improving build performance, and establishing upgrade-safe patterns for shared UI packages.
- Improved CI confidence by stabilizing flaky end-to-end tests and reducing non-deterministic failures, helping maintain a predictable release cadence.
- Standardized error handling across multiple frontend services and API clients, making issues easier to triage and reducing duplicate bug reports.

Harborline Digital

January 2022 to Present

Full Stack Engineer (Contract)

Remote

harborlinedigital.co

- Delivered production web applications for small and mid-sized clients using Next.js and Node.js, covering scoping, implementation, deployment, and post-launch support.
- Led lightweight delivery rituals (weekly planning, code reviews, and release notes) to keep stakeholders aligned and reduce last-minute rework.

Applied Research Lab

Summer 2023

Research Software Intern (HCI & Learning Tools)

On-site (UK)

- Built a browser-based study tool that captures interaction signals to support usability research, enabling faster iteration across multiple prototype rounds.
- Automated reporting by generating per-participant summaries and exports, replacing manual spreadsheets and improving consistency of results.

Projects

LumenLearn

Next.js, Postgres, caching, analytics

Next.js learning platform

https://lumenlearn.app

- Built a content-driven learning platform with fast page loads and search-friendly architecture, focusing on reliability on lower-end devices.
- Improved retention by shipping offline-friendly behaviour and smart caching for repeat sessions, reducing repeated network calls.

Next.js, PostgreSQL, Caching, Analytics

TrackRidge

Node.js, React, PDF export

Job search tracker + tailored resume export

https://github.com/rowan-mercerc/trackridge

- Created a self-hostable job tracking tool to capture role snapshots, notes, and status changes in one place for consistent follow-up.
- Automated tailored exports by generating ATS-friendly PDFs from selected experience blocks and skill keywords, keeping manual review in the loop.

Node.js, React, PDF, Search

Kinetic Ledger

FastAPI, Next.js, Docker

Self-hosted training log + metrics

https://kinetic-ledger.dev

- Implemented a self-hosted training log with metrics dashboards and import/export features, prioritizing user ownership of data.
- Maintained developer ergonomics via Docker-based local setup and a small test suite for core calculations.

FastAPI, Next.js, Docker, Testing

Education

Northbridge University

September 2021 to June 2025

Leeds, United Kingdom

BSc (Hons) Computer Science

First Class

Course page

Selected modules: Web Engineering, Algorithms & Data Structures, Databases, Software Engineering (Agile), Human-Centred Computing.

Skills

Frontend	Backend & Tooling	Ways of Working
React, Next.js, TypeScript, Tailwind CSS, Redux Toolkit, Vite, GraphQL, Webpack	Node.js, Express, FastAPI, PostgreSQL, MongoDB, Docker, AWS (S3/IAM basics), GitHub Actions, Playwright, Jest	Agile delivery, Code review, Incremental refactoring, Observability basics, Documentation, Stakeholder communication

Languages

English

Native / bilingual proficiency
